Evansville Water and Light are having pole inspections done this year by **Utility Asset Management** they are expected to start July 14th and will be on Utility property for a couple weeks.

The work being done by **Utility Asset Management** is in conjunction with our 2026 Annual Utility Pole Testing Program and will require brief work on subject properties, including the back yards of some properties where the utility has lines running at the back of the property.

We always require professionalism from our contractors and nothing they do affects the safety and reliability of our system that customers expect. Contractors are valuable in assisting us in this work of serving our members.

If you have any further questions, you may contact City Hall (608)882-2266 and you will be directed to an appropriate team member for further information or an explanation of work being done in your neighborhood.

Thank you for your support for this work on the electric distribution system.

Below is a logo of the company that will be doing the inspections.

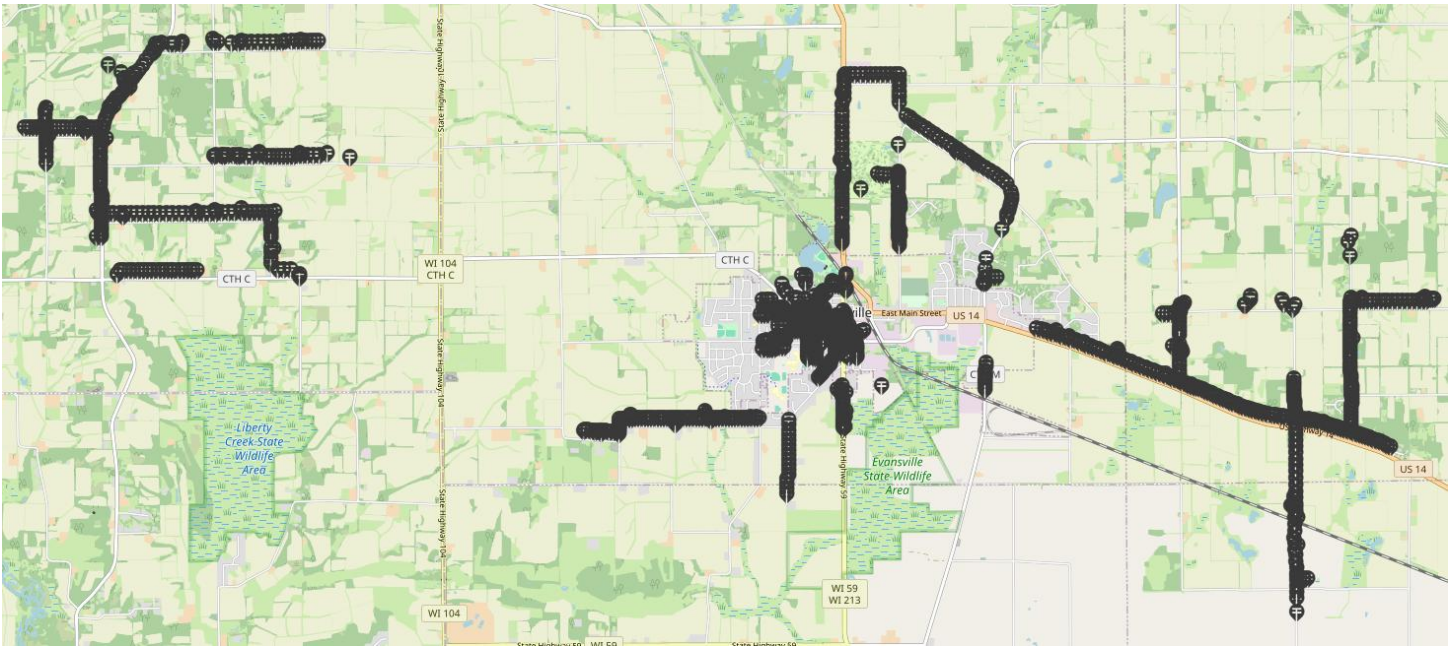

Scott Kriebs

Municipal Services Director

City of Evansville/ Evansville Water and Light

Below is a system overview of the inspections.

Below is an overview of what needs inspected within the City Limits.
